

2. Requirement Analysis Phase

ComicCraft - AI Comic Story Creator using Gemini Models

Phase Details

Functional Requirements	The system should collect user inputs, generate a comic outline, create narration and dialogue, generate illustrations, display a comic preview and export the completed comic as PDF.
Input Requirements	The application should accept the story prompt, character name, setting, tone and art style.
AI Requirements	Gemini is used for structured story generation and Stable Diffusion is used for illustration generation.
Frontend Requirements	A simple web interface should allow users to enter details and view the generated comic.
Backend Requirements	FastAPI should receive the submitted data, coordinate the AI workflow and return the generated content.
Output Requirement	The completed comic should be arranged into a structured layout and made available as a downloadable PDF.

Prepared as a separate phase document for the ComicCraft project.
