

5. Project Development Phase

ComicCraft - AI Comic Story Creator using Gemini Models

Phase Details

Frontend Development	Develop the HTML, CSS and Jinja2 interface for collecting inputs and displaying the comic.
Backend Development	Develop the FastAPI application and routes for form-based and JSON-based comic generation.
Story Generation	Integrate Gemini to generate the structured comic outline, narration and character dialogue.
Image Generation	Integrate Stable Diffusion to generate comic-style illustrations from image prompts.
Comic Assembly	Use layout_builder.py to combine each panel's title, image and text.
PDF Export	Use exporters.py and FPDF to create the final comic PDF and provide an export-success response.

Prepared as a separate phase document for the ComicCraft project.
